PREFACE

Soon after its organization in 1910 the COMMITTEE ON VOCATIONAL OPPORTU-NITIES OTHER THAN TEACHING of the Association of Collegiate Alumnæ found that it needed to study not only the occupations already entered by educated women or open to them, but also existing provisions for training for these occupations. In its annual report in 1911 the committee recommended the compilation of a bulletin giving classified information as to vocational training for women in the United States.

In our effort to carry out this recommendation we have prepared the following alphabetical list of occupations and institutions training for them. While most of the information herein contained has been available in catalogues and other publications, it has been unorganized and difficult to obtain and compare. We have attempted to bring the material together in such form that it may be readily used both by those seeking to secure vocational equipment and by those giving such persons information and advice.

So far as we know, it is the first list of its kind in this country. A somewhat similar list has been appearing in different form in England. Like most first attempts, it lays no claim to completeness or to absolute accuracy. It has not been possible for the committee to make any general first-hand study of the institutions listed. The information has been collected by means of cards sent out to various institutions to be filled by their own authorities and returned to the committee with copies of their latest official publications. The returns have been compared with these printed statements, and have been in many cases supplemented by further correspondence and occasionally by personal interviews. Certain institutions made no reply to repeated requests for information. Certain others replying have been omitted for what seem to the committee sufficient reasons. Undoubtedly some institutions that should be included have been omitted, and others have been included where fuller knowledge would not warrant their appearance. We hope that the use of the list will disclose such errors. One of the advantages of its publication in tentative form is that it may thus serve as a definite point of departure for criticism and revision.

Our classification of occupations is likewise tentative and practical rather than exhaustive and logical. Many of the newer occupations belong equally well in several fields, a fact that we have sought to indicate by abundant cross-references. Certain types of institution we have omitted altogether. These include schools of acting, schools of music, schools of oratory, public-speaking and expression; training-schools for nurses except those definitely connected with higher institutions; business or commercial schools except those connected with higher institutions. We likewise omit university and college schools and departments of education except where these offer training in new and special types of teaching. We have made only general entries under Dentistry, Engineering, and Pharmacy, calling attention to the fact that most of the coeducational universities offer training to women in these fields, and that all such schools or departments are listed in the annual reports of the United States Commissioner of Education.

In many types of training, such as training in agriculture or home economics, it has been difficult to make statements regarding length of courses, requirements for admission, etc., that are not misleading. Most of the work offered under these titles is of undergraduate character, leading to a special degree upon the completion of the regular four years' college course. It is often impossible to tell whether an institution offers graduate work. But even where such work is not specifically mentioned, more concentrated technical courses would undoubtedly be provided for women with degrees from colleges of liberal arts.

It must not be supposed that employment in occupations other than teaching is always to be secured easily and promptly even by women with training. Teaching is undoubtedly the largest and best organized field, and from the nature of our institutions will remain so. In other occupations there is more uncertainty and irregularity, and in some lines women are still pioneers. But the fields for trained women are opening and widening rapidly, and with the help of the recently established bureaus of occupation for women and of other agencies, no well equipped woman should meet with undue delay in securing the sort of work for which she is prepared and in which she is interested.

The committee bespeaks the co-operation of all having occasion to use the list in the endeavor to make it more accurate, and gratefully acknowledges the aid that it has received from institutions and individuals in the collection and arrangement of material.

A LIST OF INSTITUTIONS

GIVING VOCATIONAL TRAINING

TO WOMEN

Arranged alphabetically by occupations and by institutions and courses under each occupation

ACCOUNTANCY—see Business Administration

Free to residents	Short courses Summer courses	F. G. Miller Dean		
Free to residents; non- residents \$35	Short courses Summer courses	H. L. Russell Dean	ober	

NOTES ON AGRICULTURE

- (1) Certain subjects in which courses of more or less thoroughness are given in practically all the agricultural colleges have not been specially listed. These subjects are: Agricultural Chemistry; Agricultural Engineering (with the exception of Irrigation Engineering); Agronomy; Animal Husbandry (with the exception of Poultry raising); Bacteriology (Plant Diseases, Dairy Bacteriology, Veterinary Bacteriology); Biology; Entomology; Farm Management.
- (2) The admission requirements in most of the institutions are the regular college entrance requirements.

 For college graduates, therefore, the length of the course would depend largely upon individual preparation and needs.

Opportunities for graduate work of more or less value and for the attainment of advanced degrees may be had in almost any of the institutions listed. For more particular information see U. S. Bureau of Education Bulletin, 1911: No. 2, "Opportunities for Graduate Study in Agriculture in the United States" and its supplement, or the circulars of particular institutions.

INSTITUTION	COURSES GIVEN	ADMISSION REQUIRE- MENTS	LENGTH OF COURSE	DEGREE CON- FERRED
University of California Department of Architecture Berkeley, Cal.	Regular course in architecture	Two years college work with pre- scribed courses in mathematics drawing physics, civil engineering and archi- tecture	4 yrs.	B. S. in archi- tecture
Carnegie Institute of Technology School of Applied Design Pittshurgh, Pa.	Regular course in architecture Construction design (1914-1915) Teachers' course including credits in architecture Evening courses	Certification or examina- tion in speci- fied college entrance subjects, op- tions in drawing modeling, etc	4 yrs. min- imum in day course 2 yrs. in teachers' course	Day course B. A. iu archi- tecture Evening course certifi- cate.

- (3) It has been difficult here to make a fair comparison of the tuition paid in the various institutions, as some of the institutions count tuition as free, but demand a considerable sum total of fees. As a rule fees have not been included under this heading.
- (4) When it has been ascertainable that short courses of less than one academic year's duration are given in the institutions listed, that fact has been entered under this heading.
- (5) This list of occupations is merely suggestive. It should be noted that openings for women without capital or special opportunity are seldom found outside of journalism, teaching, investigation or social work in agriculture.

CIVIL SERVICE-FEDERAL, STATE, MUNICIPAL

Types of occupation in the civil service depend on the candidate's training and on the special branch of the service that she seeks to enter. For ways of securing the desired training, consult appropriate headings in this list.

Eligibility to positione in any of the three classes of civil service is secured through the passing of civil service examinations, or, rarely, through the meeting of some other form of requirement set by civil service authorities. Eligibility, however, does not necessarily mean appointment, and frequently lapses after the expiration of a certain time. In the federal service, all examinations are legally open to women, but their chance of appointment depends on the department or bureau concerned, and varies greatly. Some departments appoint no women. In state and municipal service, examinations are often specified as open or not open to women.

In the federal service the salaries of women as clerks and administrative or technical assistants are better than for the same types of work in private employment; but women practically never reach the higher positions and the higher grades of salary, above \$2000. In state and municipal civil service, salaries vary in different states and cities, and are, on the whole, lower than in the federal service.

TUITION	SUMMER AND EVENING COURSES, ETC.	PERSONS TO ADDRESS	REMARKS	(3) OCCUPATIONS FOR WHICH THIS TRAINING PREPARES
\$100 sometimes remitted in special cases		Mrs. Lucinda W. Prince Director	The school has placed all its graduates thus far. It is unable to meet the demand for teachers. Fourteen college graduates have taken-the course, and hold positions as educational directors in department stores teachers of salesmanship, welfare managers, etc.	Educated women have not gone into the field as actual salesmen Growing demand for teachers of salesmanship and opportunities for using this training in vocational guidance. Possible field as sales

The types of work in the federal service may be classified as follows:

Clerical work—including administrative and special positions often calling for technical training and the taking of considerable subordinate responsibility.

Work as accountants, agents, computers, assistant curators, draftsmen and typographical workers, editorial assistants, ethnologists, examiners of accounts and claims, interpreters, lecturers, librarians, scientific assistants, special investigators, statisticians, teachers in government institutions, translators.

The types of work in state and municipal service may be classified as administrative work, clerical work, and work as agents, inspectors, or vieitors in connection with boards or institutions; work as scientific or technical assistants in state or municipal laboratories, libraries, museums, etc.; work as special investigators for boards, commissions, etc.; work as teachers in state or municipal institutions.

The fullest account of the openings for women in the federal civil service is to be found in a study made in 1912 by the Washington Branch of the Association of Collegiate Alumnæ, entitled "A Report on the Status of Women in the Classified Civil Service of the United States Government in the District of Columbia," published in the Journal of the Association of Collegiate Alumnæ, Vol. 6, No. 3, April, 1913.

Requests for information should be addressed to the United States Civil Service Commission, Washington, D. C., which issues semi-annually a manual of examinations, revised to January 1 and to July 1, and furnished on request. This contains very specific information. The Commission fills positions in the District of Columbia service, in "field" or outside service, and certain positions in the insular service. State and municipal civil service commissions issue frequent bulletins listing positions to be filled through civil service examinations, and also formal reports. Requests for information should be addressed to the civil service commission of the special state or city.

COSTUMING—see Art, Fine and Industrial CURATORSHIP—see Art, Fine and Industrial DAIRYING—see Agriculture

DANCING—see Physical Training

DENTISTRY-see Preface

No specific institutions are given under this heading. There are schools and departments of dentistry connected with most of the coeducational universities. A full list of schools of dentistry is to be found in the second volume of the current annual report of the United States Commissioner of Education.

DIETETICS—see Household Economics

DOMESTIC SCIENCE-see Household Economics

⁽¹⁾ An increasing number of universities, schools of philanthropy, etc., are giving courses or groups of lectures on eugenics. The fullest information regarding the eugenics movement is to be secured from the Eugenics Record Office, or from the Training School, Vineland, N. J.

ENGINEERING—see Preface and Scientific Training

No specific institutions are given under this heading. There are schools or departments of engineering connected with many of the coeducational universities, and a very few women have taken full training in engineering. One or two higher technological schools are open to women. The annual report of the United States Commissioner of Education for 1911, Vol. 2, gives 15 women and 31,489 men students of engineering in the United States. A list of universities, colleges, and technical schools, with courses and students in engineering, is to be found in the second volume of the current annual report of the United States Commissioner of Education.

University of Wisconsin College of Agriculture Madison, Wis.	General course in home economics		4 yrs.	B. S.

- (1) Nearly all the coeducational universities and agricultural colleges give courses in household economics and art. Lack of space has led us to omit a number of institutions. A list of universities, colleges, and technological schools, with courses and students in household economy, is to be found in the second volume of the current annual report of the United States Commissioner of Education.
- (2) For admission to most of these institutions, high school education or regular college entrance subjects are required. College graduates may usually omit the academic work, confining themselves to the purely technical study.

University of Washington Gatzert Foundation Seattle, Wash.	Courses for psychological clinicians and teachers of defective children	Regular college entrance		Bachelors and advanced degrees

⁽¹⁾ The mental examination, testing, and classifying of children and adults is a recent educational and social movement, but one which has developed with extraordinary rapidity, especially since the introduction into this country of the Binet-Simon tests for intelligence at various ages (1908). Psychological clinics have been established chiefly for the testing of backward and defective children; but their methods are being used in connection with juvenile courts, probation work with girls, etc., and there is bound to be still wider application. For the most recent information regarding psychological clinics, address Editor The Psychological Clinic, University of Pennsylvania, Philadelphia, Pa., or Prof. J. E. W. Wallin, University of Pittsburgh.

PSYCHOPATHIC TRAINING—See Eugenics; Medical Social Service;

Psychopathic research and psychopathic social service belong to so new a field of work that specific courses of training, especially for women, have not been organized. In general, preparation is to be secured through courses in abnormal psychology and psychiatry given in university departments of psychology, through advanced courses in nervous and mental diseases given in certain medical schools, and through laboratory or social-service positions of a more or less apprentice character in hospitals for the insane, psychopathic institutes, etc. The work also requires training and aptitude in general social service.

Departments of psychology in the University of Chicago, Johns Hopkins University, Leland Stanford Junior University, the University of Michigan, the University of Pennsylvania, and the University of Wisconsin offer courses in ahnormal psychology. The medical schools in connection with Boston University, the University of Chicago, Cornell University, Johns Hopkins University, the University of Michigan, the University of Minnesota, and Tufts College offer courses in nervous and mental diseases with hospital and clinical training. The schools for nurses at Johns Hopkins and Minnesota give training in the nursing of nervous and mental diseases.

PUBLIC HEALTH TRAINING—See Agriculture; Household Economics; Training; Social Service

(1 INSTITUTION	COURSES GIVEN	ADMISSION REQUIRE- MENTS	LENGTH OF COURSE	DEGREE CON- FERRED
Massachusetts Institute of Technology Boston, Mass.	General courses in biology and public health Advanced courses Bacteriology of fermentation industries Industrial hygiene and sanitation Municipal lahoratory methods and sanitation Lahoratory practice and problems Sanitation of homes, public buildings and watershede Sanitary and vital statistics Water analysis, supplies, and purification Summer courses in biology and public health	Examination in mathema- tics, chemis- try, physics	4 yrs.	B. S.

Medicine; Nursing in Social Service; Social Service

The University of Michigan has a special psychopathic ward in the University Hospital, and the new Phipps Psychiatric Clinic of Johns Hopkins University offers exceptional opportunities to students of psychology, medicine, and nursing. The Chicago School of Civics and Philanthropy (see Social Service) offers a summer course for attendants and nurses in institutions for the insane.

The Government Hospital for the Insane, Washington, D. C., (Dr. Shepard I. Franz, Psychologist) and the new Psychopathic Hospital in Boston under the Massachusetts State Board of Insanity (Dr. E. E. Southard, Director) are examples of institutions that might provide a few apprentice positions to workers with good preliminary training. A number of hospitals for the insane are employing field and social workers who have had preliminary training in eugenics.

Medical Social Service; Medicine; Nursing in Social Service; Scientific

TUITION	SUMMER AND EVENING COURSES, ETC.	PERSON TO ADDRESS	REMARKS	OCCUPATIONS FOR WHICH THIS TRAINING PREPARES
\$250 Summer courses usually \$25 each	Summer courses June- September	W. T. Sedgewick Director		Public health positions are increasingly held by persons with training as physicians, nurses, or scientific workers, together with interest in social service. The field is more limited for women than for men; but opportunities are rapidly developing. Public health positions are mainly of two kinds, positions as inspectors or positions as research assistants in public health laboratories. Some of the main lines of work are: Board of health work—state or city boards. See civil service, inspection, investigation

PUBLIC SPEAKING--see Preface

PUBLISHING HOUSE WORK—see Art; Business Administration; Journalism;

Secretarial Training

With the exception of certain courses in printing, publishing, and proof-reading given in some of the schools of journalism, there is no specific training for publishing house work. A good general education, secretarial training, and aptitude for writing furnish the best preparation. Publishing house positions are of two types, business and editorial, of which the first type only is open to the beginner. See Advertising, Proof-Reading, Publishing House Work. Vocation Series Bulletins Nos. 2, 4, 6 (1911) Women's Education and Industrial Union, Boston.
